**Problem 1:** Prove that  $((p \implies q) \land (q \implies r)) \implies (p \implies r)$  is a tautology.

- a) by using truth tables,
- b) by using logic equivalence laws.

(4P)

**Problem 2:** Suppose you have predicates A(x), E(x), and W(x). Negate the following logical statements and then push all negations inward so that they are only acting on the predicates A(x), E(x), and W(x). Also, state whether the statement is a predicate or a proposition.

- a)  $\forall x (A(x) \implies E(x))$
- b)  $\exists x (E(x) \land \neg W(x))$

(4P)

**Problem 3:** Translate the following sentences into symbolic logic.

For every positive real number  $\varepsilon$ , there is a positive real number  $\delta$  for which the relation  $|x-a|<\delta$  implies  $|f(x)-f(a)|<\varepsilon$ .

(2P)

**Problem 4:** Show that the subset relation  $\subset$  is transitive.

(2P)

**Problem 5:** Let M, N be sets.

- (a) Prove that  $N \subset M$  if and only if  $M \cup N = M$ .
- (b) Show that  $M \cap N = M \cup N$  holds true if and only if M = N.

(4P)

**Problem 6:** Let M, N, L be sets.

a) Prove the following rule of de Morgan:

$$M \setminus (N \cup L) = (M \setminus N) \cap (M \setminus L).$$

b) Prove the following distributivity law:

$$M \cap (N \cup L) = (M \cap N) \cup (M \cap L).$$

(4P)
