

Math 3140: Homework 12

- A. 18.1 Use orbit counting methods to find the number of distinct ways to paint the edges of a cube with two colors.
- 18.7. How many different ways are there of coloring the vertices and edges of a regular hexagon using red, black or yellow for the edges and black or white for the vertices?
- B. 20.1 (a) Show that if $|G| = 126$, then G has a nontrivial proper normal subgroup.
(b) Show that if $|G| = 1000$, then G is not simple.
(c) Suppose $|G| = p^k m$ where p is prime and p does not divide m . Prove that if $p > m$, then G is not simple.
- (1) Prove that if G is abelian and simple, then $G \cong \mathbb{Z}_p$ for some prime number p .
- 20.3. (a) Prove that if all the Sylow subgroups are normal, then G is isomorphic to the direct product of its Sylow subgroups.
(b) If you know that G is abelian, and $|G| = 154000$, then what do you know about G ?
- 20.7. Classify the groups of order p^2q if p is not congruent to ± 1 modulo q (and $p \neq q$ are prime).
