## Math 3140: Homework 4

## Due: Wednesday, September 21

A.
6.3. Show that the elements $w \in S_{9}$ such that $\{w(2), w(5) \cdot w(7)\}=\{2,5,7\}$ form a subgroup of $S_{9}$. What is the order of this subgroup?
$6.7+$. (a) Describe/characterize the elements of order 2 of $S_{n}$.
(b) Show that if $n \geq 4$, then every permutation can be written as a product of two permutations of order 2. Hint: Answer the question first for cyclic permutations.
(c) What goes wrong if $n<4$ ?
B. The braid group $B_{n}$ is a group generated by the diagrams of $S_{n}$ but we keep track of where strings cross. For example,

and we keep track of these crossings when multiplying,

What is the inverse of an element in $B_{n}$ ? Show that $B_{n}$ has infinite order. What are the elements of finite order in $B_{n}$ ?
C. $6.6,6.9$
D. 7.5
